

GROUP 1

Members: Dillon, John, and Rylee

Each group will:

1. Load a dataset

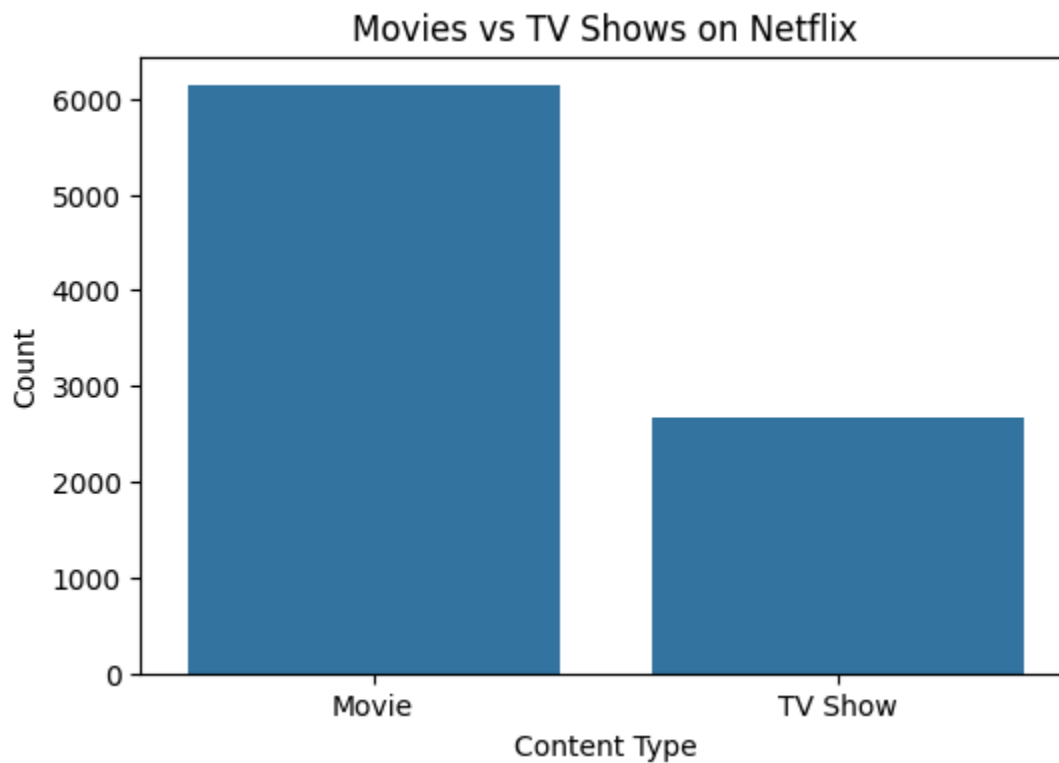

Done!

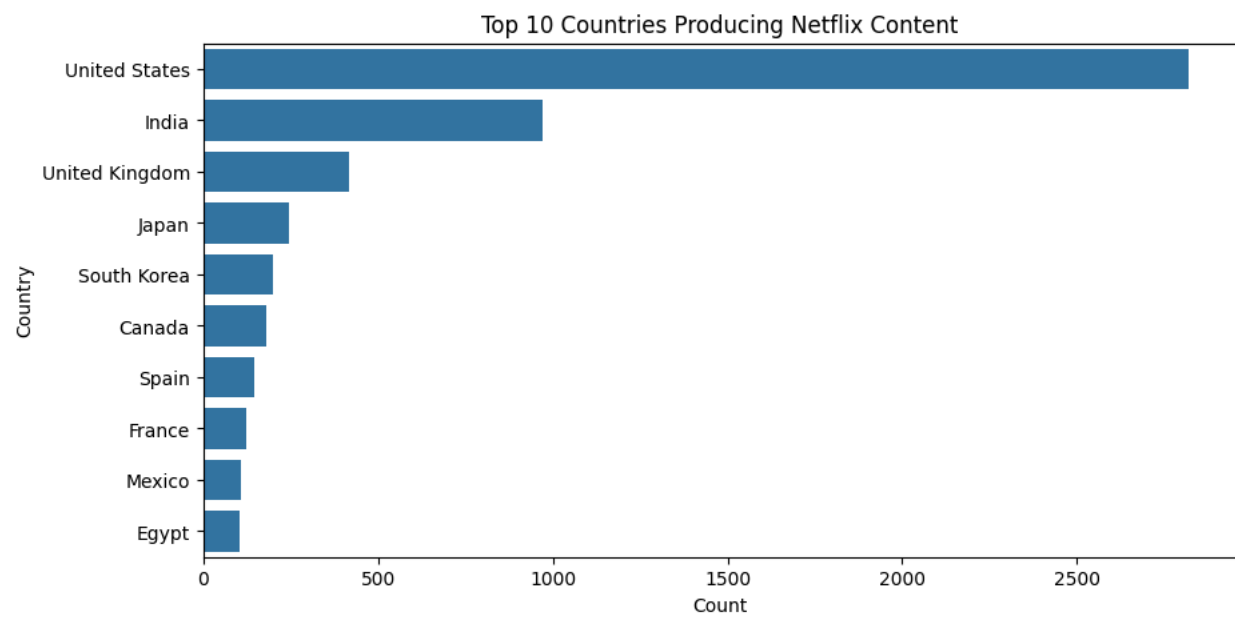

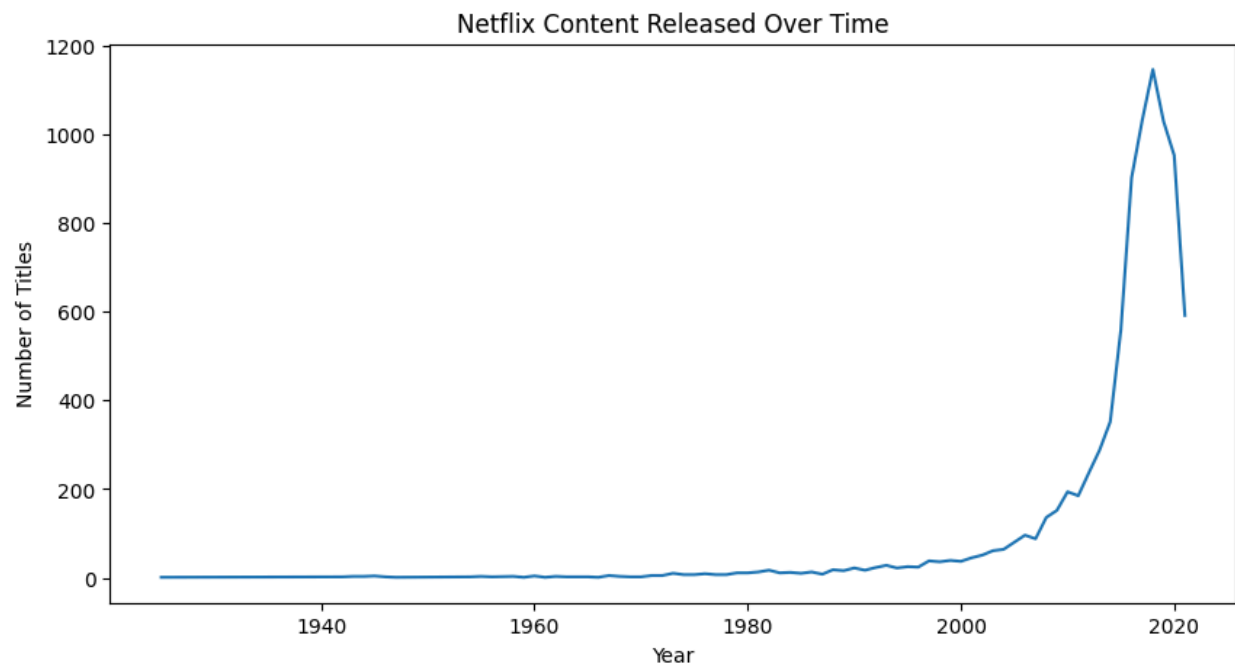

2. Perform exploratory data analysis (EDA)

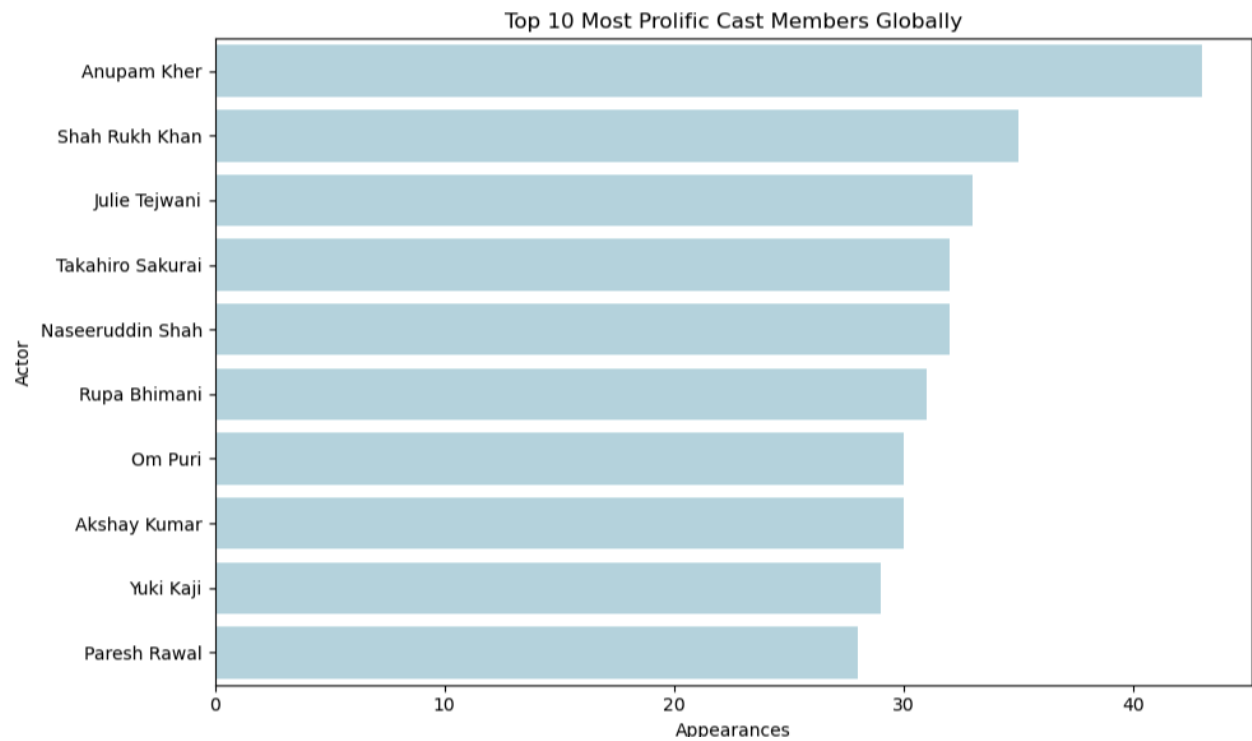

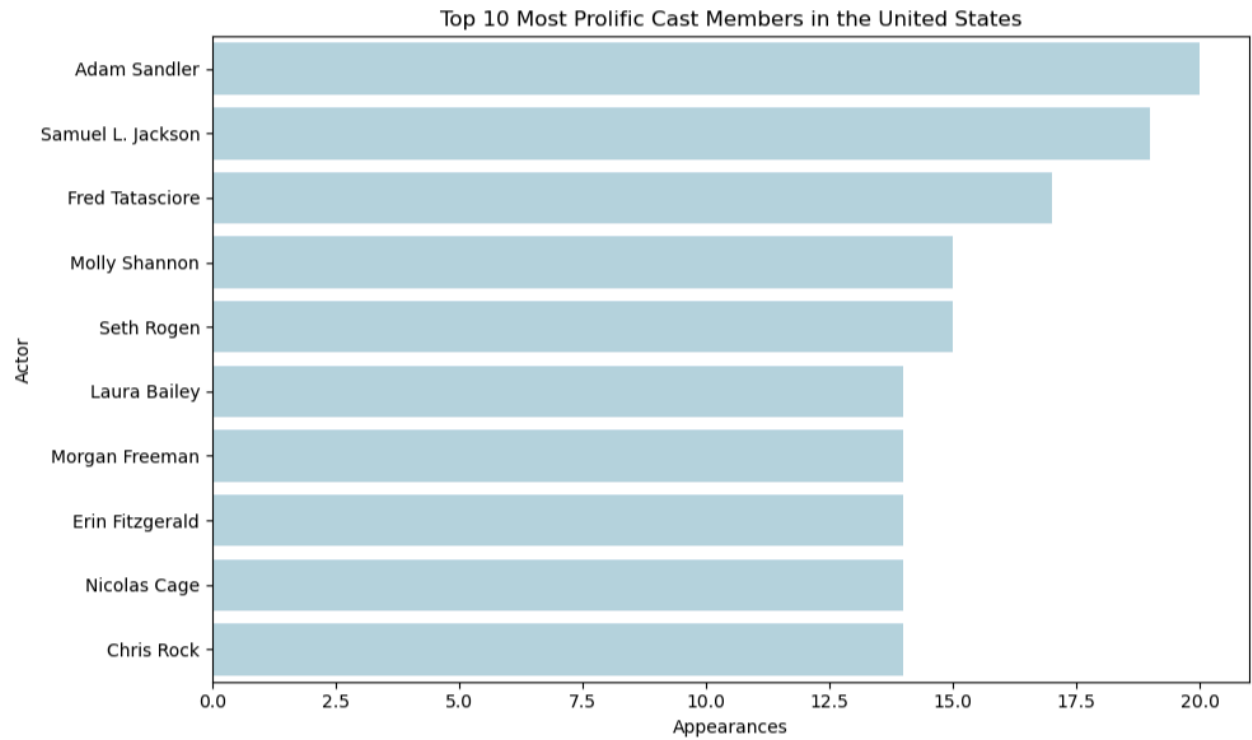

Performed on Google Colab

- Directors
- Cast
- Country
- Duration/Rating

3. Create visualizations

4. Discuss visualization choices

Movies vs TV Shows:

- Countplot was used because the data is just quantities.
- Shows clear differences between differing quantities.

Netflix Content Released Over Time:

- Misleading title!
- A line plot best visualizes the timeline of content released that Netflix hosts.

Top 10 Countries Producing Netflix Content:

- Barplot allows for clear insight into the number of content released among the 10 countries.
- The countries being on the y-axis allows for better visualization of the country titles, and clear distinction between each country.

Top 10 Most Prolific Cast Members in the United States/Globally

- Barplot shows the top 10 actors as well as the number of appearances they have in Netflix-hosted titles

5. Present findings

Movies vs TV Shows:

- Movies are by far more numerous.

Netflix Content Released Over Time:

- Right before 2005 is when we can see a stark increase in content production that is published on Netflix, with a dramatic increase up until 2020.
- After 2020, there is a sharp decline in production, most likely due to COVID19.

Top 10 Countries Producing Netflix Content:

- The United States is the most producing country, followed by Japan, and then the UK.
- The rest of the countries are very similar.

Top 10 Most Prolific Cast Members in the United States

- Adam Sandler is the most commonly appearing actor in Netflix titles from the US, closely followed by Samuel L. Jackson.

Top 10 Most Prolific Cast Members Globally

- Anupam Kher is the most commonly appearing actor in Netflix titles across all countries.
